

## Sprint 2 Report, UCSC Tutor App, 11/09/2015

Actions to stop doing: The team should stop focusing on nonessential features that are not included in the minimal viable product (MVP).

Actions to start doing: The team should start assigning more specific tasks so that there is no confusion as to who is doing what. The team should start announcing when tasks are completed so we can update our scrum board and burnup chart. The team should start letting other team members know if they have to leave early from the meeting.

Actions to keep doing: The team should keep communicating well via Slack.com, as it's been the only good way for us to communicate meeting times outside of class time. The team should also keep meeting before every class. The team should keep learning how to use git and the other applications we are using in this project.

### Work completed:

No user stories were fully completed, however, all were very close to completion.

### Work not completed:

As a tutor I would like to be able to edit a user profile so that students can see my credentials, availability, and location.

As a student, I would like to be able to have a search criterion for time availability/ratings/classes taken(speciality), so that I can be matched with tutors that fit my needs.

As a student, I want to be able to rate my tutor experience, so that other students can see the tutor's reliability/friendliness/knowledge of the subject.

As a tutor, I want to be able to submit feedback of my students punctuality.

### Work completion rate:

Completed 0 user stories. 24 ideal working hours completed. 16 days during prior sprint.  
0 user stories per day. 1.5 ideal working hour per day.
